For this project We will visualize a dataset containing the number of page views each day on the freeCodeCamp.org forum from 2016-05-09 to 2019-12-03. The data visualizations will help us understand the patterns in visits and identify yearly and monthly growth.

```

Creating a function that draws a bar chart. It will show average daily page views for each month grouped by year. The legend should show month labels and have a title of Months.

```
In [ ]: def draw_bar_plot():
             df bar = df.copy()
             df_bar['Year'] = pd.DatetimeIndex(df bar.index).year
             df bar['Month'] = pd.DatetimeIndex(df bar.index).month
             df bar = df bar.groupby(["Year","Month"])['value'].mean()
             df bar = df bar.unstack()
             df bar
            month_names=['January', 'February', 'March', 'April', 'May', 'June', 'July',
                          'August', 'September', 'October', 'November', 'December']
             fig,ax = plt.subplots(figsize=(14,12))
             df bar.plot(kind="bar",ax=ax)
             ax.set_ylabel("Average Page Views")
             ax.set_xlabel("Years")
             ax.legend(title="Months", labels=month names)
             fig.savefig('bar plot.png')
             return fig
         draw bar plot()
```

<Figure size 1400x1200 with 1 Axes>

<Figure size 1400x1200 with 1 Axes>

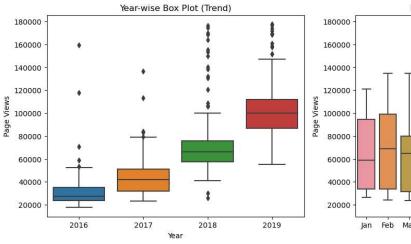

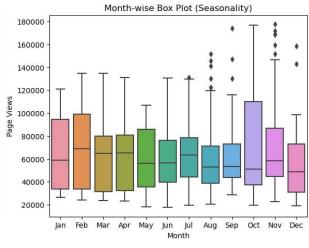

Creating a draw_box_plot function that uses Seaborn to draw two adjacent box plots. These box plots should show how the values are distributed within a given year or month and how it compares over time. The title of the first chart should be Year-wise Box Plot (Trend) and the title of the second chart should be Month-wise Box Plot (Seasonality).

```
In []: def draw_box_plot():
    # Prepare data for box plots (this part is done!)
    df_box = df.copy()
    df_box.reset_index(inplace=True)
    df_box['year'] = [d.year for d in df_box.date]
    df_box['month'] = [d.strftime('%b') for d in df_box.date]
    df_box['Month'] = pd.DatetimeIndex(df_box['date']).month
    # Draw box plots (using Seaborn)
    fig,(ax1,ax2) = plt.subplots(ncols=2,figsize=(14,5))
    sns.boxplot(df_box,x="year",y="value",ax=ax1).set(xlabel="Year",ylabel="Page Views"
    sns.boxplot(df_box.sort_values(by="Month"),x="month",y="value",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=ax2).set(xlabel="I",ax=a
